

**ENGINEERED TO PROTECT LIVES**

## BALLISTIC FABRICS

### for maximum protection

Ballistic fabrics are designed to ensure maximum safety in defence and security applications. Made from advanced fibres like para-aramid, glass or other high-performance raw materials refined with specialised finishes, the fabrics combine exceptional strength, durability, lightweight construction

and high resistance – making them a trusted choice for ballistic protection, stab resistance and other critical safety applications.

**MEHLER**'s protective textiles stand for proven quality, continuous innovation, decades of experience and uncompromising safety.

## CHARACTERISTICS

- // Fabrics and non-crimp protective products
- // Thermoplastic and thermosetting matrix systems
- // PFAS-free, water-repellent treatment
- // Extensive laboratory and testing equipment
- // Customer-oriented developments
- // Independent validation and verification of ballistic protective elements

## APPLICATIONS

- // Soft ballistics
- // Hard ballistics
- // Fragment defence
- // Stab and spike protection
- // Multi-threat protection
